

NETFLIX FUNCTIONAL REQUIREMENTS TRACEABILITY MATRIX					
Project Name: Netflix Hybrid-based Content Recommendation System					
Business Requirements Document (BRD)		Functional Requirements Document			Test Case Document
Business Requirement ID	Business Requirement / Business Use case	Functional Requirement ID	Functional Requirement / Use Case	Priority	Test Case ID
BR-1	The system shall generate personalized recommendations based on user preferences and viewing history.	FR-01	UC-01: Generate Personalized Recommendations	High	TC-001
BR-2	The system shall recommend content similar to the selected movie or TV show.	FR-02	UC-02: Recommend Similar Content	High	TC-002
BR-3	The system shall rank recommendations based on relevance.	FR-03	UC-03: Rank Recommendation Results	Medium	TC-003
BR-4	The system shall refresh recommendations when user preferences change.	FR-04	UC-04: Refresh Recommendations	High	TC-004
BR-5	The system shall deliver recommendations through secure REST APIs.	FR-05	UC-05: Deliver Recommendations via API	High	TC-005
BR-6	The system shall display appropriate error messages when recommendations cannot be generated.	FR-06	UC-06: Handle Recommendation Errors	High	TC-006

BR-7	The system shall log recommendation requests and system events.	FR-07	UC-07: Log Recommendation Requests	Medium	TC-007
BR-8	The system shall maintain recommendation history for auditing and analysis.	FR-08	UC-08: Maintain Recommendation History	Low	TC-008
BR-9	The system shall allow administrators to manage movie metadata.	FR-09	UC-09: Manage Movie Metadata	Low	TC-009
BR-10	The system shall analyze user interaction data to personalize recommendations.	FR-10	UC-10: Analyze User Interaction Data	High	TC-010
BR-11	The platform must collect user feedbacks on content recommendations	FR-11	UC-11: Give better recommendations for having high engagement rates	Low	TC-011
