

NETFLIX NON-FUNCTIONAL REQUIREMENTS TRACEABILITY MATRIX					
Project Name: Netflix Hybrid-based Content Recommendation System					
Business Requirements Document (BRD)		Non - Functional Requirements Document			Test Case Document
Business Requirement ID	Business Requirement / Business Use case	Non-Functional Requirement ID	Non-Functional Requirement / Use Case	Priority	Test Case ID
BR-NFR-1	Recommendation results must be generated within the specified response time	NFR-PR-01	UC-NFR-01: Recommendation Response Time	High	TC-NFR-001
BR-NFR-2	Recommendation API shall support high concurrent user traffic	NFR-PR-02	UC-NFR-02: Scalability Testing	High	TC-NFR-002
BR-NFR-3	The Recommendation API must be available 99.9% of the time.	NFR-PR-03	UC-NFR-03: High Availability	High	TC-NFR-003
BR-NFR-4	The recommendation service shall automatically recover from temporary failures.	NFR-PR-04	UC-NFR-04: Fault Recovery	Medium	TC-NFR-004
BR-NFR-5	Any failures with the recommendation API must not affect other services of the platform	NFR-SR-01	UC-NFR-05: Service Isolation	High	TC-NFR-005

BR-NFR-6	In case of any system failures or data issues, the system shall prevent incomplete or corrupted recommendation results from being displayed.	NFR-SR-02	UC-NFR-06: Safe Recommendation Handling	Medium	TC-NFR-006
BR-NFR-7	User data shall be encrypted during transmission and storage.	NFR-SEC-01	UC-NFR-07: Data Encryption	High	TC-NFR-007
BR-NFR-8	The recommendation system shall provide secure communication between internal services.	NFR-SEC-02	UC-NFR-08: Secure Service Communication	High	TC-NFR-008
BR-NFR-9	The recommendation system shall support future enhancements without significant redesign.	NFR-QA-01	UC-NFR-09: Maintainability	Low	TC-NFR-009
BR-NFR-10	The recommendation system shall remain available with minimal downtime.	NFR-QA-02	UC-NFR-10: System Availability	High	TC-NFR-010
BR-NFR-11	The recommendation system shall consistently generate reliable recommendation results.	NFR-QA-03	UC-NFR-11: Recommendation Reliability	High	TC-NFR-011
